Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claim 19-23 and 83-96, drawn to a multi-generator ultrasonic drive circuit classified in class 310 subclass 319

II. Claim 97-129 drawn to method of generating a frequency drive signal classified in class 310 subclass 316. Inventions group I and group II are unrelated.

Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not seem to be related because the method of group II is not limited to using multiple generators to produce the separate frequency bands. Thus the method could be provided by generator systems other than the specific system defined by group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

In a preliminary reading of the claims the examiner was unable to discern how the claims of group 1 relate to any of the drawing figures. The closest figures seemed to be 58-61, but these did not seem to show all the features claimed. Thus, support for these claims is in question at this time. The examiner would appreciate applicants guidance regarding the above. Thank you.
